GOVERNMENT OF THE CENTRAL PROVINCES AND BERAR

MEDICAL DEPARTMENT

Nagpur, the 25th November 1941.

READ—

The Triennial Report on Civil Hospitals and Dispensaries in the Central Provinces and Berar for the years 1938, 1939 and 1940.

READ ALSO—

The District Reports.

RESOLUTION

The number of hospitals and dispensaries rose to 392 [348] owing to the opening of 51 dispensaries, all in rural areas, and of the Women's Hospital at Gondia and the closure of 8 dispensaries. The number of beds rose to 2,583 [2,394], the largest increase being in the Irwin Hospital, Amraoti (38). The number of indoor and outdoor patients steadily increased during the triennium, the number in the last year of the triennium being 49,692 [44,290] and 4,346,175 [3,591,292], respectively. The number of surgical operations also rose to 345,194 [341,356]. Government notes with satisfaction the steady progress in the extension of medical relief despite financial difficulties and the ever-increasing popularity of hospital treatment as revealed by these figures.

2. Although 51 dispensaries were opened in rural areas, it need hardly be mentioned that considerable leeway has still to be made in affording medical relief to rural areas, particularly as the death and infant mortality rates in this province are the highest in the country. With a view to quickening progress to suit the local conditions Government decided to enlist the help of indigenous system of medicines to fight disease, after considering the report of the committee appointed to determine the place which these systems should occupy in the scheme of medical relief provided by the state. Two schemes were formulated in 1939, one for the establishment of 83 ayurvedic and unani dispensaries at the rate of one per tahsil and the other for subsidizing a similar number of ayurvedic and unani practitioners to settle in villages. So far 46 such dispensaries have been opened and 39 practitioners subsidized. It is too early yet to assess the value of this innovation but Government feels that the schemes have not had much chance of success in the absence of an informed supervising agency. Recently therefore the creation of a post of inspector of indigenous medicine has been sanctioned. Legislation for the establishment of a Board of Indian Systems of Medicine for controlling and regulating the practice of indigenous systems of medicine could not be completed before the suspension of the constitution.

Simultaneously with the above two schemes, another scheme for subsidizing 22 allopathic medical practitioners (one per district council) was prepared, and so far 9 practitioners have settled in villages. The progress is slow and disappointing owing

to dearth of practitioners willing to settle in rural areas where the scope of private practice is necessarily limited; but Government is convinced that the problem of handy medical aid in the countryside with its distances, lack of communications and absence of urban amenities cannot be solved until this initial averseness to settle down in a village is successfully combated and overcome.

Government observes that there is scope for increased use being made of the assistant medical officers in charge of rural dispensaries and is therefore considering whether they should not be required to tour in neighbouring villages on certain days of the week both for treating the sick and for health propaganda, so that the influence of rural dispensaries, which must for lack of funds continue to remain few and far between for a considerable time to come, may not be limited to their headquarters villages.

3. As 52 per cent of the mortality in the province is caused by malaria alone it is satisfactory to note that there was a general increase in the number of malaria patients seeking hospital treatment. This was due to the larger supplies of quinine available because of the Government of India grant.

4. Anti-tuberculosis effort in the province received a fillip from the appeal of Her Excellency the Marchioness of Linlithgow. A sum of nearly rupees one lakh has been collected for fighting this scourge and the Central Provinces and Berar Provincial Tuberculosis Association has been formed, registered and affiliated to the Tuberculosis Association of India.

There are four tuberculosis clinics in the province and these as well as the Pendra Road Sanatorium are doing excellent work. Government notes with pleasure the tribute paid to the clinic at Nagpur by Dr. C. Frimodt Moller, the Medical Commissioner to the Tuberculosis Association of India, who described it as being undoubtedly one of the best tuberculosis clinics in India. The Provincial Tuberculosis Association has examined the valuable suggestions made by Dr. Moller for improving the clinics and intensifying the anti-tuberculosis campaign and its recommendations are now being examined by Government.

5. The general tendency to become more hospital-minded is seen at its best in respect of leprosy. In 1936 the number of leprosy cases treated was only 1,390 while in 1940 the number was almost six times as large, *viz.*, 7,849. The exact number of lepers in the province is not known but the number of cases seeking hospital treatment must be only a very small fraction thereof. The real problem in the attack of leprosy is the occupation of space in leper homes by burnt-out cases to the detriment of cases requiring treatment and hospitalization. Government is examining the matter, but is constrained to admit that so far a practicable solution has not been found.

6. The number of eye cases treated in 1941 was 410,007 [324,886 in 1937]. The Central Provinces and Berar Blind Relief Association continues to do valuable propaganda and to espouse the cause of the blind. Government has approved of the proposal for construction of an up-to-date eye hospital

at Nagpur to be known as the King George V Memorial Ophthalmic Hospital and when ready it will fill a large lacuna in the scheme of medical relief in the province. The attention of Government has recently been drawn to the fact that blindness is often caused by persons, mostly from outside the province, who perform couching operations and it is actively considering the means to be adopted to check this nefarious practice.

7. The disease of yaws is widely prevalent in the aboriginal areas of the province and a cheap plan dispensary has been opened at Bhamragarh in the Chanda district mainly for treating yaws cases. Recently a regular campaign for survey of the incidence of the disease and treatment of the patients by injections has been initiated in the aboriginal areas of the Chanda district out of the Government of India grant for the welfare of aborigines.

8. During the year 1940, the number of European (including Anglo-Indian) and Indian nurses employed in all hospitals and dispensaries in the province were 35 [47] and 196 [127], respectively, the figures in brackets being for the year 1937. The increase of 57 in the strength of the nursing personnel is welcome, but the proportion of one nurse to 215 indoor patients glaringly depicts the present inadequacy of the nursing staff. In fact, in the majority of hospitals and dispensaries nursing is wholly done by relatives of the patient and by compounders and other servants. Government has recently appointed a committee to examine the entire question of nursing and its report will be awaited with interest. The scheme for the training of 'village sisters' started at the Silver Jubilee Hospital, Raipur, continues to make satisfactory progress.

9. The Nurses' Registration Council has been constituted under the Central Provinces and Berar Nurses' Registration Act, 1936. The provisions of this Act which prohibit unregistered nurses, health visitors, midwives and dais from getting employment or practising have been applied to the whole province but it is apprehended that the paucity of trained dais specially in rural areas will make enforcement difficult in practice.

10. The total expenditure on hospitals and dispensaries during the triennium was Rs. 51,83,024 [Rs. 41,61,722]. Government regrets to note that apart from the provincialized hospitals, the financial condition of most of the hospitals and dispensaries was very unsatisfactory. Local bodies are generally showing an increasing unwillingness to shoulder their share of the responsibility for providing medical relief and tend to regard this vital matter as only of secondary importance to be provided for at their will and only if funds are available after expenditure on other matters. Some local bodies have gone to the extent of disowning their responsibility altogether and have requested Government itself to take over charge of the hospital or dispensary. Government provides the medical officers for local institutions and it must make it quite clear that it regards provision of medical relief as a function of a local body and that if any council or committee fails to provide

adequately, the only alternative will be to close the dispensary and remove the medical officer and leave the local body to face public criticism and displeasure as best as it can. Government is also examining whether the Central Provinces and Berar Municipalities and Local Self-Government Acts should be amended to include medical relief amongst the obligatory duties of local bodies and to prescribe the percentage of their fund which they must spend on medical relief.

11. The buildings of many hospitals and dispensaries need radical improvement which cannot be carried out for want of funds. One example is that of the Mayo Hospital at the provincial capital. The buildings of this hospital are not up to modern standards and scattered over a wide area, making difficult the rendering of efficient medical and nursing aid and service to the patients. The question of the reorganization of the Mayo Hospital, which has been considered several times in the past without any tangible progress, has once again been brought to the forefront by Colonel Hance. Government is now securing the services of an architect to advise whether the present buildings are capable of being remodelled or should be scrapped altogether and a hospital of modern design be built either on the present or another site.

12. A scheme has been initiated for the improvement of the Mental Hospital, Nagpur, which has not kept pace with modern ideas of what a hospital of this kind should be. A six-year plan of improvement costing over rupees two lakhs has now been drawn up and a total provision of Rs. 38,887 has been included in the current year's budget for increased staff, electrification, provision of iron cots for the patients, improvement of drainage, etc.

13. The period after the outbreak of the War has been a difficult one for the department, which had to carry on with a staff greatly depleted in strength owing to the deputation of officers of all ranks for military duty. Government is therefore pleased to note the high tribute paid by Colonel Hance to the personnel under him. Government must also record its appreciation of the work done by Lieutenant-Colonel N. S. Jatar, who held charge of the Medical Department in addition to his duties as Inspector-General of Prisons for a total period of eighteen months. Colonel Hance took over charge from him on the 16th December 1940 and has already given ample proof of zeal and energy in the discharge of his duties. The thanks of Government are due to him for the very interesting and thought-provoking report which he has written.

ORDER.—Ordered that a copy be forwarded to the Inspector-General of Civil Hospitals, Central Provinces and Berar, for information and guidance and that it be published in Part I of the *Central Provinces and Berar Gazette*.

By order of the Governor, C. P. & Berar,

C. C. DESAI,

Secy. to Govt., C. P. & Berar, Medl. Dept.

TRIENNIAL REPORT ON CIVIL HOSPITALS AND DISPENSARIES IN THE CENTRAL PROVINCES AND BERAR FOR THE PERIOD ENDING 31ST DECEMBER 1940

Statement A—Hospitals and dispensaries.—During the three years under review 51 new dispensaries and one Women's Hospital at Gondia have been opened and eight dispensaries closed; and at the close of the triennium there were 392 hospitals and dispensaries working in the province, compared to 348 hospitals and dispensaries present at the close of the previous triennium. All these 51 new dispensaries were opened in rural areas.

2. Up to the end of December 1940, 158 dispensaries out of the total of 214 local fund dispensaries exclusive of the headquarters hospitals have been transferred to the management of local bodies, *i.e.*, 80 in Berar and 78 in Central Provinces and at present 80 dispensaries in Berar and 79 in the Central Provinces are being managed by local bodies. Five dispensaries in Berar and 51 in Central Provinces still remain under the control of dispensary fund committees.

3. During the triennium schemes for—

(1) subsidising 22 medical practitioners in rural areas one in each district council—(9),

(2) subsidising 83 Vaidyas and Hakims in rural areas one in each tahsil—(39),

(3) establishment of 83 Ayurvedic and Unani dispensaries in rural areas one in each tahsil—(46).

were sanctioned by Government. The figures in brackets indicate the number in actual operation at present.

So far subsidised medical practitioners have been appointed under the district councils of Betul, Hoshangabad, Amraoti, Narsinghpur, Nagpur, Mandla, Yeotmal, Akola and Nimar. Localities for subsidised medical practitioners have also been selected in the district council areas of Bhandara, Damoh, Seoni, Raipur, Jubbulpore and Balaghat, but owing to the dearth of qualified candidates, no appointments could be made at these places. Applications from candidates passed from Medical Schools of other provinces were invited, but the response was poor.

Subsidised Vaidyas have so far been appointed under the district councils of Betul (3), Bhandara (3), Amraoti (5), Narsinghpur (2), Seoni (2), Nagpur (4), Yeotmal (5), Akola (6), Raipur (4) and Buldana (5).

Ayurvedic and Unani dispensaries have so far been sanctioned under the district councils of Betul (3), Bhandara (3), Amraoti (5), Narsinghpur (2), Mandla (3), Yeotmal (5), Akola (6), Raipur (4), Buldana (3), Balaghat (3), Wardha (3) and Drug (6).

4. Out of the Government of India grant of Rs. 1,15,000, the establishment of cheap plan dispensaries at the following places has been sanctioned during the triennium :—

Kurkheda and Bhamragarh—Chanda.

Mounda—Nagpur.

Atnair, Mohta, Chicholi and Shahpur—Betul.

Bilaigarh, Kurud and Kharora—Raipur.

Sahaspur-Lohara and Dondi—Drug.

Raipur forest village—Amraoti.

Lamta—Balaghat.

Barhi and Bakal—Jubbulpore.

Baldi—Nimar.

Karanjia—Mandla.

Baraduar—Bilaspur.

Sainkhera and Bordha—Hoshangabad.

Darekasa—Bhandara.

Borakhedi—Buldana.

Kurai and Bamhni—Chhindwara.

Out of these, dispensaries at Barhi, Bakal, Baldi, Kurai, Bamhni, Baraduar and Dondi have not yet been opened.

The conditions governing the Government of India grant were found in practice unworkable, and on the request of the Provincial Government, the Government of India were pleased to modify them and to delegate to the Provincial Government the power to relax the condition of contributions required locally for the building of endowment funds.

5. In 1938-39 the Provincial Government earmarked a sum of Rs. 50,000 from the Excise Revenues for the establishment of 10 cheap plan dispensaries. The conditions laid down for its utilization were the same as those governing the Government of India grant. Out of this grant the establishment of cheap plan dispensaries has been sanctioned at the following places :—

Shirala in Amraoti district.

Borgaon Manju in Akola district.

Imlai in Jubbulpore district.

Amgaon and Deori in Bhandara district.

Bagbahra in Raipur district.

Piplod in Nimar district.

Aundhi in Drug district.

Out of these, the dispensary at Imlai is yet to be opened.

6. Considering the financial stringency due to the war and to trade depression this is an appreciable achievement; but in spite of it medical relief for rural areas in this province is still most unsatisfactory. Aboriginal and forest tracts in particular need special and immediate attention. This has already received Government's attention, and an Officer was placed on special duty to enquire into the conditions of the aboriginal tribes and to suggest means for its amelioration.

His Excellency Sir Francis Wylie, the then Governor of the Central Provinces and Berar, made an extensive tour in the aboriginal areas of Balaghat and Mandla districts in March 1940 and as desired by him the question of the establishment of two dispensaries in Dindori and Baihar tahsils is being considered by the Forest Department.

7. The Mayo Hospital, Nagpur, which is the chief hospital of the province, is in a deplorable state. With a view to modernise it, the Government appointed a Provincial Hospitals Enquiry Committee to suggest ways and means for its improvement and also that of the provincialised hospitals at Jubbulpore, Raipur and Amraoti, the Main Hospital, Akola, and the Robertson Medical School, Nagpur. The Committee held a few sittings, but owing to the absence of its President, the Committee is considered to have lapsed. The writer has recently examined the situation and the various schemes of improvements to the Mayo Hospital previously prepared and has recommended to Government that an experienced architect be consulted and asked to survey the various possibilities of the situation and to report on their probable cost.

8. **Statement B—Distribution of medical personnel.**—The strength of the medical personnel working in all classes of hospitals and dispensaries in the province at the end of the triennium was 1,366, of which 147 were in hospitals and dispensaries at the provincial headquarters, 790 in those in the district headquarters and other urban areas, and 429 in those in rural areas.

9. **Nursing.**—The condition of nursing in this province continues to be deplorable as remarked in the last triennial report. During the triennium the scheme for the appointment of male nurses at the Mayo Hospital, Nagpur, was started and three such nurses were appointed in 1938. Four additional female nurses were also sanctioned for the Mayo Hospital in 1938. The improvement of nursing needs immediate attention and it is proposed to examine the whole question in all its aspects and submit porposals to Government at an early date.

The scheme for the training of village women known as "Village Sisters" is being continued at the Silver Jubilee Hospital, Raipur.

10. **Honorary Physicians and Surgeons.**—Honorary Medical Officers are being employed in large numbers at the provincialised and other main hospitals as Surgeons, Physicians, Specialists in eye, ear, nose and throat diseases and as dentists. They are of great assistance to the staff and the people. The whole question of honorary appointments to the hospitals is being reviewed and it is expected that regulations governing these appointments will shortly be sanctioned by Government.

11. **Statement C—Indoor patients.**—The number of beds available for indoor patients at the end of the triennium was 2,583 showing an increase of 189. The largest increase in the number of beds was 38 at the Irwin Hospital, Amraoti; 26 at the

Dufferin Hospital, Amraoti, 20 at the Women's Hospital, Chhindwara, 18 at the Main Hospital, Buldana, 12 at the Main Hospital, Betul, and 10 at the Main Hospital, Wardha.

12. The number of in-patients continues steadily to increase, *i.e.*, from 44,290 in 1937 to 47,874 in 1938, 47,583 in 1939 and 49,692 in 1940. This number should increase further if adequate bedding and better hospital amenities in the form of nursing, etc., are provided. The accommodation at the outlying dispensaries is generally sufficient.

13. The indoor accommodation available at the various Dufferin Fund hospitals for women in the province is being fully utilised, and in a number of these hospitals the daily average of indoor patients exceeds the number of beds available. The Dufferin hospitals have maintained and enhanced their reputation for good work. These hospitals are, on the whole, better equipped than the main hospitals, and are well managed. Their medical staff is competent, and nursing arrangements are relatively satisfactory. The majority of the Dufferin hospitals act as training centres for nurses and midwives.

14. The proportion of beds to the total number of in-patients in Central Provinces and Berar was 1 to 19.24 in 1940. The rate of increase in the number of beds does not keep pace with that of the increase in the number of in-patients. The proportion of beds to the total number of in-patients in 1937 was 1 to 18.50, while in 1934 it was 1 to 16.46. Accommodation is therefore progressively inadequate.

15. Of the total number treated in 1940, 10,988 or 22.11 per cent were treated in the Dufferin hospitals (21.91 in 1937). The percentage of women treated in general hospitals was 22.71 (20.75 in 1937). The increased attendance indicates that the hospitals are increasingly popular among women. The percentage of police, paupers and medico-legal cases was 15.72, 4.62 and 10.00 respectively in 1940 (13.83, 3.47 and 11.97 in 1937 and 19.69, 4.63 and 13.08 in 1934). The death rate of indoor patients was 5.08 in 1940 (4.99 in 1937).

16. Outdoor patients.—The number of outdoor patients during the triennium was 12,580,386 (9,949,060 during 1935—37 and 8,770,842 during 1932—34). The figures for each year of the period are as follows:—

1938—3,958,738.
1939—4,275,473.
1940—4,346,175.

17. Statement D.—This statement shows the number of beds, number of indoor and outdoor patients, number of surgical operations and the geographical distribution of infectious and other diseases treated in all classes of medical institutions in the province. The number of beds available at the end of the triennium was 2,074 for males and 1,462 for females or a total of 3,536 in all.

18. Principal diseases treated at hospitals and dispensaries of all classes.—The total number of sick treated during 1940 was 4,974,650 (4,899,207 in 1939), *i.e.*, an excess of 75,443. Malaria,

dysentery, diarrhoea, cholera, eye disease, skin disease and venereal diseases were some of the more important diseases treated during the year.

19. **Malaria.**—The province is very malarious and malarial treatment was a serious problem. Fifty-two per cent of the total number of deaths in the province during the year 1940 were caused by this disease alone. The number of cases treated for malaria during 1940 was 848,273. The disease was prevalent all over the province, during the year, and certain areas are hyperendemic. The percentage of malaria cases treated to total sick varied from 23.28 in Balaghat to 19.64 in Betul and 10.43 in Bilaspur. The highest figure of such percentage in 1937 was 26.03 in Betul (19.64 in 1940) whereas it is 23.28 in 1940 in the Balaghat district. This is a satisfactory feature and is due to the more adequate supply of quinine made, which was possible on account of the grants by the Government of India specially for this purpose. During the period of triennium under report 1,338 lbs. of quinine was supplied by the Director of Public Health from the Government of India grant for free distribution.

There is a general increase in the number of people seeking treatment for malaria at all the hospitals. Malaria produces the highest number of sick in the province. The country is full of forests and its people are very poor. A malarial survey is an indispensable preliminary to any serious attempt to tackle the malarial problem. It has been held that in hyperendemic and especially forest and primitive areas, the only real control of malaria that is practicable is the distribution of quinine in quantities sufficient to tide the infected individual over his recurrent attacks until he has developed the high degree of immunity which is the usual outcome of such repeated attacks.' This appears to the writer to be a counsel of despair, and is more over not generally accepted by malariologists. It has been found in forest areas that the identification of the carrying mosquito and a knowledge of its breeding habits has enabled extremely useful simple practical measures to be taken against it, and has, in conjunction with quinine distribution, effected a very marked reduction in both the incidence and spleen rates of these areas.

The anti-malarial section of the Public Health Department which was abolished on financial grounds in 1931 has not since been revived. In a province so rich in endemic and hyperendemic areas it is difficult to conceive a falser or more shortsighted economy.

The writer has already addressed Government in the matter and recommended that arrangements should be made immediately for—

(*a*) a malarial survey of the Mandla district,

(*b*) revival of the anti-malarial branch of the Public Health Department,

(*c*) the selection and training of an anti-malarial officer of the status not below that of an assistant surgeon, and

(*d*) the arrangements for a systematic series of further malarial surveys of aboriginal tracts by this officer in continuation of that of the Mandla district.

20. **Cholera.**—This province is notorious for cholera and every few years disastrous epidemics occur in which the number of victims amounts to thousands. In 1940 there were 4,974 deaths from this disease and the number of cases treated in hospitals and dispensaries was 829. Prompt measures were taken and the disease brought under control. Sanitary conditions and conservancy arrangements both in rural and urban areas and provision for safe water supplies from reliable sources need greatly to be improved.

21. **Tuberculosis of the lung.**—The figures of cases treated in hospitals and dispensaries during the triennium are—

1938—5,009.

1939—4,350.

1940—5,060.

The figures cannot be said to be indicative of the spread of the disease, as cases are not all notified. The disease constitutes a scourge which requires serious and constant attention. There are four tuberculosis clinics in the province, one at each divisional headquarters and the Union Mission Tuberculosis Sanatorium at Pendra Road where Government maintains 40 beds at its own expense. They have been doing excellent work. In November 1939 Dr. C. Frimodt Möller, Medical Commissioner to the Tuberculosis Association of India, visited the Tuberculosis Clinics at Nagpur, Jubbulpore and Amraoti and the Tuberculosis Sanatorium at Pendra and has made valuable suggestions regarding improvements to the clinics. They have been examined by the Provincial Tuberculosis Association and its recommendations are now under the consideration of Government.

22. Leprosy.—The exact number of lepers in the province is not known as no regular survey has so far been done. It runs into thousands and the disease is on the increase. The number of cases treated for leprosy at hospitals and dispensaries was 4,875 in 1938, 7,844 in 1939 and 7,849 in 1940. The problem of leprosy is receiving special attention and there are leprosy treatment centres at various hospitals and dispensaries. Local enterprise is also not lacking and in some districts, such as Wardha, Amraoti and Yeotmal, District and Tahsil Committees have been formed, and it is reported that they are working in satisfactory co-ordination with Government officials. The number of leper hospitals and homes in the province is seven which are run by the Mission. Government lepers are sent to Chandkhuri in Central Provinces and Kothara in Berar which have been declared to be Leper Asylums under the Lepers Act.

Grants amounting to Rs. 4,813 for the improvement of the drainage system at the Chandkhuri Leper Home and Rs. 6,250 for the construction of additional buildings at Kothara were given by Government during the triennium. Owing to war conditions the mission authorities have been experiencing great difficulty, as money is not forthcoming from their countries of origin; and it is desirable that Government should enhance its support to these asylums, which are doing excellent work.

23. **Smallpox.**—The number of cases treated for smallpox was 1,376 (479 in 1939 and 162 in 1938). Of the 1,376 cases, 645 were vaccinated, 636 not vaccinated and the vaccinal condition of 95 was not known. The highest number of cases treated in a hospital is 295 in the Nagpur district.

24. **Plague.**—The number of cases treated at hospitals and dispensaries during the triennium was 244 in 1940, 635 in 1939 and 263 in 1938.

25. **Diseases of the eye.**—The number of eye cases treated during the year 1940 was 410,007 (374,714 in 1939). 23,685 suffered from trachoma, 1,475 from glaucoma and 5,182 from cataract. Dispensaries are fairly well provided and equipped for treatment of ordinary eye troubles. At the inspection of the school children special attention is paid to the condition of the eyes. There is a great deal of eye disease in the province and this problem is receiving special attention. The Central Provinces and Berar Blind Relief Association is doing propaganda work and helping the blind. During the triennium 11 assistant medical officers have been given special training in eye work for six months at the Mayo Hospital. These specially trained officers are posted to eye centres in the province. The establishment of an Eye Hospital at Nagpur from the King George V Memorial Fund has recently been sanctioned by Government and this much needed measure is being pushed through.

A great deal of blindness prevalent in the province is caused by "couchers". They filter down from outside the province and perform couching operations on ignorant persons. This dangerous practice is followed all too often by the loss of one or both eyes from subsequent inflammation and requires to be prohibited by law and penalised.

26. **Venereal diseases.**—The incidence of this disease in the Civil population in the province is relatively high, especially in the Chhattisgarh division. 47,525 cases were treated during the year 1940 (43,768 in 1939 and 40,294 in 1938). The figures do not however furnish accurate estimates of the prevalence of the disease as most of the persons suffering from them do not resort to the public hospitals for treatment for several reasons. The treatment of these diseases in most of the hospitals has been on haphazard lines. The incidence of venereal disease is especially high among the aboriginal tribes in forest areas, and after much reflection the writer has come to the conclusion that the most practicable solution of the problem in these areas lies in travelling venereal dispensaries. The "cycle" of such a dispensary should be seven villages or groups of villages. Its "orbit" should be such that each cyclical area is visited twice a year for two years. In this way each patient (or a large majority) would receive systematic arsenic and bismuth injections twice a year for two years which would cure many and control all the syphilis cases seen. In 1938 and 1939, Government gave special grant of Rs. 8,000 each for the treatment of this disease but on account of financial stringency no such grant was sanctioned by Government in 1940.

26-A. **Yaws.**—During the triennium a cheap plan dispensary was opened at Bhamragarh right in the heart of the aboriginal country mainly with a view to tackling the increasing number of

yaws cases. The treatment of this disease is also given at certain dispensaries; and it is reported that treatment by injection is becoming popular and a large number of patients come forward as the news of free successful treatment is spread by patients who are cured. The treatment has received an impetus by the grant sanctioned by Government.

27. **Statement E—(1) Surgical Operations.**—The number of surgical operations performed in the State, public, local fund and private-aided hospitals and dispensaries was 118,315 in 1940, 116,892 in 1939 and 109,987 in 1938, *i.e.*, a total of 345,194 (341,356 during the last triennium). Under instructions received from the Director-General, Indian Medical Service, in 1940 intravenous injections are not now shown as operations. This explains the small increase in figures for 1940. A comparative statement of important surgical operations performed during the years 1932—34, 1935—37 and 1938—40 is given below :—

	1932—34	1935—37	1938—40
Ovariotomy ..	79	107	169
Hysterectomy ..	60	71	103
Removal of appendix ..	110	217	306
Operations for intestinal obstruction ..	21	61	74
For cure of hernia ..	471	580	692
Operations on spine and spinal cord ..	6	12	15
Operations for liver abscess ..	39	51	41
Prostatectomy ..	53	81	81
For cataract ..	2,189	2,177	2,442
Excision of joints ..	26	25	40
Cæsarian section ..	127	147	219
Operations on intestines ..	96	114	144

(2) Selected Operations.—20,643 were performed (18,889 during the preceding triennium). The surgical work of all the officers was satisfactory.

28. **Statement F—Financial condition—Contribution from Government.**—The amounts contributed by Government including salaries during the last three years were (in thousands) Rs. 789 in 1938, Rs. 860 in 1939 and Rs. 772 in 1940. The decrease during the year 1940 is due to the opening of fewer new dispensaries for which non-recurring grants were paid by Government and to the appointment of medical officers drawing less pay at hospitals and dispensaries.

29. **Contributions from Local and Municipal Bodies.**—The contributions received were (in thousands) Rs. 292 in 1938, Rs. 355 in 1939 and Rs. 656 in 1940. The increase is mainly due to the opening of new dispensaries.

30. **Other Receipts.**—Other receipts were (in thousands) Rs. 394 in 1938, Rs. 353 in 1939 and Rs. 483 in 1940.

31. The financial position of most of the hospitals and dispensaries continues to be unsatisfactory and in several cases it is deplorable. Their activities are marred by non-payment of

their due contributions by the local bodies. The Main Hospitals Akola, Buldana, Yeotmal, Harda, Katni and Narsinghpur, may be quoted as instances. Lack of funds has presented the Hospital Committees of these institutions with an insoluble problem; and a time has come when there is, for some of them, no alternative but to close down at least in part. Local bodies are incurably apathetic and do not realise their responsibilities in regard to provision of medical relief. Not only are they not paying their contributions regularly but in several cases they have reduced their contributions arbitrarily. Several Civil Surgeons and Deputy Commissioners have repeated the suggestion that it should be made obligatory on local bodies to devote a certain percentage of their income to the medical relief and the fixed contributions should not be allowed to be varied without the sanction of Government, a suggestion with which the writer entirely agrees. The Commissioner, Jubbulpore division, remarks that the apathy on the part of local bodies seems an incurable disease and the only solution—admittedly a retrograde one—is for Government to take over the dispensaries again and cut the grants to local bodies. The Deputy Commissioner, Drug, suggests the imposition of a medical cess. The Deputy Commissioner, Mandla, remarks that in his opinion local dispensaries are simply not worth maintaining on the present lines.

32. **Expenditure.**—The total expenditure during the last 3 years was Rs. 14,95,731 in 1938, Rs. 18,67,447 in 1939 and Rs. 18,19,846 in 1940. This makes a total of Rs. 51,83,024 for this triennium (Rs. 41,61,722 in the previous triennium). The pay of medical officers, men and women, has decreased from Rs. 455,468 in 1937 to Rs. 436,866 in 1940 mainly due to the appointment of medical officers drawing less pay at hospitals and dispensaries. The pay of nurses has increased to (in thousands) Rs. 120 in 1938, Rs. 121 in 1939 and Rs. 129 in 1940 due to the time-scale of pay and appointment of substitutes in the leave vacancies of nurses. The pay of inferior servants has increased to (in thousands) Rs. 268 in 1938, Rs. 276 in 1939 and Rs. 281 in 1940. The figures under medicines (including bazar) were (in thousands) Rs. 206 in 1938, Rs. 224 in 1939 and Rs. 251 in 1940. The diet of patients cost Rs. 29,603 in 1938, Rs. 29,531 in 1939 and Rs. 26,629 in 1940 (Rs. 22,878 in 1935, Rs. 25,474 in 1936 and Rs. 36,395 in 1937).

The total expenditure on all hospitals amounting to Rs. 18,19,846 works out to Rs. 0.41 per head of the total attendance (both indoor and outdoor). The cost of medicine per patient is Rs. 0.05 which is the same as in 1937 and 1934.

33. **Statement G—Invested capital.**—Throughout the province there are 118 hospitals and dispensaries with invested capital. There was an opening balance of Rs. 11,93,415 on the 1st January 1938. During the triennium a sum of Rs. 2,31,807 was invested. Deposits withdrawn and securities sold amounted to Rs. 2,33,805 leaving a balance of Rs. 11,81,591 on the 31st December 1940. During the triennium the net notable investments were Rs. 30,482 by the Elgin Hospital, Jubbulpore, Rs. 15,436 by the Dufferin Hospital, Amraoti, and Rs. 7,992 by the Women's Hospital, Bhandara.

34. Post-mortem examinations.—1,654 medico-legal post mortem examinations in connection with judicial investigations were performed during the year 1940, 611 at the district headquarters and 1,043 at out-stations. Of the 1,654 post-mortem examinations, 83 were conducted by Civil Surgeons, 561 by Assistant Surgeons and 1,010 by Assistant Medical Officers.

35. Anti-rabic treatment.—This treatment is now available at 13 centres in this province against 10 during the last triennium. The number of patients treated was 1,910 in 1938, 1,719 in 1939 and 1,610 in 1940.

36. Medical Services—Indian Medical Service.—In accordance with the Indian Medical Service (Civil) (Reserved Post) Rules, 1939, the total number of Indian Medical Service officers to be employed in this province is 10, namely—

(i) Four Civil Surgeoncies.

(ii) One Specialist also Superintendent, Robertson Medical School.

(iii) Two leave reserve (for British Indian Medical Service officers).

(iv) Three other medical posts.

During the year 1940, two Indian Medical Service officers were recalled to military duty and consequently the number of British Indian Medical Service officers available at the end of the triennium to fill the reserved posts was only 4.

37. Class I, Central Provinces and Berar Medical Service.—The number of posts reserved for this class of officers is 9—4 filled by direct recruitment and 5 by promotion of class II officers (Assistant Surgeons).

38. Indian Medical Department Officers.—There was only one officer of this class serving in this province during the triennium under report.

39. Class II, Central Provinces and Berar Medical Service (Assistant Surgeons).—The cadre of Assistant Surgeons was increased from 50 to 52 during the triennium on account of the creation of new posts of Deputy Superintendent, Mental Hospital, Nagpur, and Lecturer in Anæsthetics at the Robertson Medical School, Nagpur. The number of leave reserve of Assistant Surgeons was also increased from 3 to 6. The cadre of women assistant surgeons was increased from 12 to 13 to provide a woman assistant surgeon at the new Women's Hospital, Gondia. A post of woman assistant surgeon as leave reserve was also sanctioned during the year 1939. Five assistant surgeons volunteered for military duty in 1940 and were appointed to the Emergency Commission of the Indian Medical Service.

40. Subordinate Medical Service (Assistant Medical Officers).—The cadre of assistant medical officers, which was 296 at the beginning of the last triennium, was increased to 320 at the end of this triennium. The increase is due to the new appointments sanctioned for 37 new cheap plan dispensaries.

The cadre is inclusive of leave reserve. The cadre of women assistant medical officers was also increased from 15 permanent and one temporary to 21 permanent and it includes two posts of leave reserve. 28 assistant medical officers were deputed for military duty during the year 1940.

41. **Robertson Medical School.**—The Robertson Medical School, which is allied to the Mayo Hospital for clinical work, is the only institution in this province which trains students for L. M. P. Diploma. The course is of four years and the number of new entrants to the school is limited to 30 a year. The question of increasing the course from four to five years is under consideration. The school is badly in need of improvement, both in the number of staff and equipment. No scholarships are awarded to men or women students at the school.

The great need for a full-fledged medical college for this province is admitted; but the cost involved is high and the question has been dropped for the present on account of financial stringency. The public demand for this measure of improvement is, however, insistent, and the All-India Medical Council have recently passed a resolution which, if approved, will render it imperative in the near future. 5 seats are reserved at the Seth Gordhandas Sunderdas Medical College, Bombay, and 5 at the Carmichael Medical College, Calcutta, for the admission of students of this province on payment of a subsidy of Rs. 500 per student per year at Bombay and Rs. 1,500 per student for the whole course at Calcutta.

42. **Post-graduate courses for Assistant Surgeons.**—The post-graduate course for Assistant Surgeons, which was stopped as a measure of economy, was revived during the triennium, and assistant surgeons were sent for that training at the King Edward Medical College, Lahore.

43. **Refresher Course for Assistant Medical Officers.**—During the triennium six courses, each of three months' duration, were held. It has now been decided that instead of every alternate financial year, two courses of three months' duration each should be held every year from October and January.

44. **Provincial Medical Library.**—The Library was destroyed in the Secretariat Fire in 1935 and is being revived. There are now 400 books in the library. The number of medical officers, who make use of the library, has been on the increase, as the following figures will show :—

Year		Number of medical officers who used the library	Number of books issued
1938	..	24	74
1939	..	30	178
1940	..	47	234

The following journals are also subscribed for by the library and circulated among the medical officers in the province :—

(1) *The Practitioner of London.*

(2) *Indian Medical Gazette.*

(3) *Tropical Diseases Bulletin.*

(4) *The Journal of Rheumatism.*

(5) *International Medical Digest*, of which a donation of 10 years' back volumes has also been received.

45. **Central Provinces Medical Examination Board.**—The Central Provinces Medical Examination Board conducted six examinations during the triennium, *i.e.*, twice a year as usual. A statement showing the number of students who appeared and passed the final Licentiate Examination of the Board during the triennium is given below :—

Date of examination		Number of students who appeared and passed					
		Appeared			Passed.		
		R. M. S., Nagpur	K. E. H. M. School, Indore	Others	R. M. S., Nagpur	K. E. H. M. School, Indore	Others
		(1)	(2)	(3)	(1)	(2)	(3)
April 1938	..	56	43	29	20	22	13
October 1938	..	42	54	28	33	32	13
March 1939	..	33	42	..	20	26	..
October 1939	..	32	43	..	13	25	..
March 1940	..	39	30	24	24	20	12
October 1940	..	29	33	..	18	28	..

The Board also conducted six examinations during the triennium, *i.e.*, twice a year in Medical and Surgical Nursing for candidates trained for three years. A statement showing the number of candidates who appeared and passed the examinations during the triennium is given below :—

		Appeared	Passed
April 1938	..	5	4
October 1938	..	17	17
March 1939	..	6	6
October 1939	..	9	9
March 1940	..	6	6
October 1940	..	13	12

The Board conducted six examinations during the triennium, *i.e.*, twice a year in Senior Midwifery (with Elementary Nursing) for candidates trained for two years. A statement

showing the number of candidates who appeared and passed the examinations during the triennium is given below:—

		Appeared	Passed
April 1938	..	21	15
October 1938	..	19	9
March 1939	..	18	14
October 1939	..	19	10
March 1940	..	18	9
October 1940	..	25	18

46. **Health Propaganda Work.**—Health propaganda work is carried on as heretofore by assistant medical officers in charge of all outlying dispensaries in their own dispensary towns on bazar days in school and in surrounding villages in certain areas with the help of charts and pamphlets.

47. **Inspections.**—During the triennium 71 hospitals (including 16 Police hospitals) and 21 dispensaries were inspected by the Inspector-General of Civil Hospitals. The work of inspection of outlying dispensaries by Civil Surgeons is regularly carried out. My predecessors have rightly remarked in the last two triennium reports that yearly inspection of dispensaries by Civil Surgeons is not sufficient and dispensaries should be inspected every six months.

In the writer's opinion, for medical relief to be effective, particularly to the aborigines, extensive touring by all medical personnel including supervising officers is essential, and existing touring restrictions should be removed. Civil Surgeons should be at liberty to inspect by surprise as well as to tour with the necessary equipment and staff for operative surgery, especially eye surgery.

48. **Personal Proceedings.**—Colonel D. H. Rai held the office of the Inspector-General of Civil Hospitals from 1st January to 5th October 1939 (except for the period from 25th April to 25th August 1939 when he was on leave). Lieut.-Colonel N. S. Jatar held the office of the Inspector-General of Civil Hospitals in addition to his own duties as Inspector-General of Prisons from 25th April to 25th August 1939 and from 6th October 1939 to 15th December 1940. The writer took over charge on 16th December 1940.

49. **Concluding Remarks.**—The period under review records an improvement in the working of the department by the establishment of a number of cheap plan dispensaries, Ayurvedic and Unani dispensaries, and subsidised practitioners and Vaidyas in villages and aboriginal tracts. The number of patients both medical and surgical, indoor and out-door, shows an increase. This progress has been achieved in the face of considerable odds, which enhances its value.

This progress notwithstanding, medical relief in the province still presents a picture of almost unrelieved gloom. Some of the buildings, though commodious and suitable in type, are

in a lamentable state of disrepair, while others have crumbling walls and leaking roofs, unhealthy surroundings, scanty and obsolete equipment, worn-out furniture and primitive conservancy arrangements which present a dismal picture of our medical institutions. Except in very few hospitals no trace of modern and up-to-date facilities is found. Nursing is far below the minimum accepted standard. The supply of drugs, especially those of common and daily use such as quinine, is quite inadequate. Above all, the finances of almost all the hospitals and dispensaries are drained to bed-rock on account of the apathy of the local bodies, poverty of the people and the indifference of the well-to-do. In the face of such rapidly failing finances adequate medical and surgical relief seems to be a possibility of a very remote future unless the local bodies realise their responsibility and afford adequate support. Moreover the problem also demands a re-orientation of ideas in the light of changing conditions. The writer is convinced that adequate medical relief cannot be provided, especially in rural areas, by the mere multiplication of dispensaries. Apart from the capital cost involved in its construction and equipment each additional dispensary opened involves, under present conditions, an increase in the pensionable cadre of assistant medical officers by one. Assuming that such an assistant medical officer serves till the age of 55 and enjoys the average expectation of life on retirement, his cost to Government is Rs. 44,520. It is obvious that the unrestricted multiplication of dispensaries involves a financial liability which this province cannot face. On the other hand the need for medical relief in rural areas is clamant, and a sound rural medical relief can only be based upon its satisfaction. In this connection I quote and would invite the special attention of Government to the words of the present Director-General, Indian Medical Service, Lieut.-General Sir G. G. Jolly, K.C.I.E., K.H.P., I.M.S., in his opening address to the Women's Medical Conference in New Delhi on the 16th December 1940:—

> "Of this, however, I am certain; a sound system of rural medical relief can only be built upon the foundation of an adequate number of medical practitioners settled in the rural areas. There is no short cut to success here; provincial, district, tahsil hospitals, however well developed, cannot take the place of the general practitioner. Even rural dispensaries, lavishly distributed as they are in the Punjab, cannot play the part that can only be filled by general practitioners. There is indeed no alternative to the general practitioners' services in the rural areas, whether it is developed as a State service, on a private basis or on the subsidized system. All my experience in the public health and medical services of India has but served to drive home this truth."

The distribution of dispensaries in these provinces is not lavish and a considerable increase in their number must be faced. To render this possible without an impossible financial strain on Government a system of short service on contract, with a bonus on its expiry, should be introduced in the subordinate medical service which would enable four assistant medical officers to be employed for the cost of one under the present pensionable system. This, however, is only one aspect of approach to the

problem, the real solution of which lies in inducing an adequate number of medical men to settle in rural areas. This can be achieved in various ways. Assistant medical officers of the contract service whose contracts have expired, or young recruits, can be settled in rural areas-on subsidy, or on a co-operative basis or by the combination of both systems. Where co-operative societies exist their members, by paying an extra few annas a month, subject to a total minimum monthly collection of, say Rs. 50, could obtain free medical attendance from a doctor approved by the society, whose remuneration and cost would be met in part by the society from these subscriptions and partly from subsidy from Government. With such a system, existing Government dispensaries could and should fulfil their legitimate function of a "cottage hospital" to which cases insusceptible of domiciliary treatment would be referred by the local general practitioners. The writer is convinced that it is on these lines as well as upon a healthy realization of their responsibilities by local bodies that alone an adequate system of medical relief can be built up.

The medical personnel of this department of all ranks deserve a high tribute and thanks for the progress they have achieved in the face of such odds.

The delay in the submission of this report is regretted. It is due to the late receipt of reports from Civil Surgeons who could not get returns in time from local bodies.

J. B. HANCE, COL., I.M.S.,

NAGPUR: *Inspector-General of Civil Hospitals,*

The 11th June 1941. *Central Provinces and Berar.*

Remarks (12)

(*a*) Piplod in the Nimar district, Mohta in the Betul district, Jamai in the Chhindwara district, Borgaon Manju in the Akola district and Baghbara, Deobhog and Kharora in the Raipur district.

(*b*) Subsidised dispensaries at Khulri in the Narsinghpur sub-division, Khirkia in the Hoshangabad district, Gumgaon in the Nagpur district and Nainpur in the Mandla sub-division.

(*c*) Haturna in the Amraoti district and Basna in the Raipur district.

(*d*) Gangubai Women's Hospital at Gondia under the Municipal Committee, Gondia.

(*e*) Subsidised dispensary at Hirdoria in the Damoh sub-division and Komakhan dispensary in the Raipur district.

(*f*) Crump dispensary was amalgamated with Elgin Hospital in the Jubbulpore district.

(*g*) Gokuldas Mills dispensary in the Jubbulpore district.

(*h*) Jamai dispensary in the Chhindwara district.
